

44 Magnum

A sustainable Nitrogen Fertiliser

44 Magnum provides both a quick and a sustained supply of nitrogen, so it reduces application frequency. It is ideal for those wet and busy times when it's difficult to apply nitrogen.

Key Benefits

Quick and sustained Nitrogen Supply

44 Magnum is ideal for those wet and busy times when it's difficult to apply nitrogen. It provides both a quick and a sustained supply of nitrogen, utilising our efficient polymer coated product, so reduces application frequency.

Added Sulphur supports active Plant Growth

44 Magnum also contains immediately available sulphur, an important nutrient alongside nitrogen for plant growth. Best applied in spring and autumn when nitrogen and sulphur soil reserves are low and plants are actively growing. It's excellent for dairy farmers to bring some quality feed into summer.

Usage

44 Magnum is 100% granulated and can be broadcast by ground spread equipment or from aircraft with minimal risk of N loss so can be applied early with confidence.

Storage

Store in a cool, dry, well-ventilated place out of direct sunlight.
