

All-in-One

Small block fertiliser made simple

All-In-One is designed for small blocks and farms. It delivers essential nutrients for growing healthy pasture all in the one blend.

Key Benefits

All nutrients in one product
Fertiliser can seem complicated. But with All-in-One, major nutrients like nitrogen, phosphorus, and potassium are included in a balanced blend along with sulphur, magnesium, and calcium which are also required by pasture and crops for healthy growth.

Trace elements too
Because we know that trace elements are vital, All-in-One contains cobalt, copper, and selenium, often needed for New Zealand soils.

Convenient and simple
Because it's all in the one blend, application is quick and easy.

Application
Apply at 250 kg per hectare in spring and autumn. Allow 20 mm of rain to fall or 20 days to pass before grazing pasture that has had All-in-One applied. It's the perfect partner to Fertco G-Lime.

Storage
Store in a cool, dry, well-ventilated place out of direct sunlight.

Chemical Analysis
