

# Double S

## Fast and slow reacting sulphur all in the one product

*Double S provides a regular and continuous supply of sulphur over an entire growing season. It combines super fine sulphur particles bound with nitrogen that react quickly with slower reacting sulphur prills.*

### Key Benefits

- Get granulated high analysis sulphur for year-round growth.
- Enjoy easy and accurate spreading, and less dust.
- Reduce wastage because Double S won't leach.

Not so long ago, sulphur deficiencies in New Zealand agriculture were rare. This was due to the widespread use of superphosphate which contains sulphur along with phosphate. However, more sulphur-free phosphate and nitrogen fertilisers are now being used, so sulphur deficiencies in our soils are more common.

Double S provides the sulphur vital for protein production and photosynthesis, while maximising nitrogen uptake. Its found in plants in similar quantities to phosphates so it's just as important. You won't grow healthy pasture and crops without it.
