

# Equine Mix

## Complete pasture nutrition for horse grazing

*Equine Mix is a blend of essential nutrients and trace elements, specifically formulated for growing pasture that will support horse health.*

### Key Benefits

#### **Balanced nutrients to grow high quality feed**

Equine Mix contains a balance of nutrients because growing high-quality pasture for horses requires more than just nitrogen. Phosphorus, potassium, sulphur, calcium, and magnesium are all equally essential for plant growth. So Equine Mix contains these nutrients, along with nitrogen, in a single, convenient blend.

#### **Trace minerals essential for horses**

Aside from the nutrients listed above, Equine Mix includes copper, cobalt, and selenium, because horses need pasture grown in soil containing these trace minerals.

#### **Application**

Apply at 400kg per hectare during spring and autumn. Allow 20mm of rain to fall or 20 days to pass before grazing pasture where Equine Mix has been applied.

#### **Storage**

Store in a cool, dry, well-ventilated place out of direct sunlight.
