

Phosta N

A BioGro certified source of natural nitrogen

Phosta N is a natural amino-based source of nitrogen, recovered from the fermentation of vegetable matter. With 10 - 14% N content, it's ideal for organic farmers and growers wherever N is needed.

Key Benefits

10 - 14% N plus other nutrients

While Phosta N is an excellent source of BioGro certified natural nitrogen, it's also packed with other nutrients such as phosphorus, potassium, sulphur, magnesium, calcium, and the trace elements sodium, iron, copper, manganese, zinc, boron, cobalt, and selenium.

Low solubility so less wastage

Because Phosta N has low solubility, its nutrients are released slowly so less is lost to the environment and more is available to plants as they grow.

Easy handling and blending

Phosta N is a dark brown granule that is easy to handle and can be blended with other organic products like fishmeal and Protamin® N13.

Application

Apply at 100 - 300kg/ha.

Storage

Store in a cool, dry, well-ventilated place out of direct sunlight.
