

# Smart Brassica Base

## A smarter way of growing brassicas

*Smart Brassica Base grows high-yielding brassica crops without the hassle of side-dressing. Because it contains seed-safe, controlled release nitrogen, you can apply it when you sow. Job done!*

### Key Benefits

#### **A complete blend**

Brassicas are heavy feeders, so Smart Brassica Base provides all the nitrogen, phosphorus, and potassium required to grow a high-yielding brassica crop. It also has boron because forage crops like kale, rape, swedes and turnips need it for optimal growth.

#### **Controlled release nitrogen**

Smart Brassica Base contains NSmart, a polymer-coated nitrogen which releases its nutrients over 3 months. Because of this controlled release pattern, nutrient availability matches the growth patterns of forage crops more closely, so they never go short of nutrient. Losses from volatilisation and leaching are reduced, so there is less wastage.

#### **Seed safe**

Smart Brassica Base is seed-safe because the nitrogen is released slowly to begin with, reducing the risk of toxicity to newly germinated seedlings. Apply it at drilling time.

#### **Application**

Apply at around 250 kg per hectare.

#### **Storage**

Store in a cool, dry, well-ventilated place out of direct sunlight.
