

Guano

A natural, organic, BioGro-certified phosphate fertiliser

Guano is the perfect phosphate fertiliser for organic growers and farmers, and those who care about the environment.

Key Benefits

A natural source of phosphate

Guano is derived from the nutrient-rich deposits of seabirds so it contains very low levels of undesirable heavy metals or flouride (unlike some phosphate fertilisers).

Perfect for organic systems

Being BioGro-certified, guano is the perfect phosphate for organic farmers and growers. Orchardists and gardeners wishing to grow organically can also use guano with confidence.

Easy on the environment

Guano is the ideal choice for those who care about the environment. Because the phosphate is released slowly into the soil, there is less chance of nutrient wastage and damage to waterways.

Easy application

Because it's granulated, guano is easy to use and apply. It can also be mixed with other fertilisers. Apply at 250 kg/ha or 250 g/m².

Storage

Store in a cool, dry, well-ventilated place out of direct sunlight.
