

Phosta K

A BioGro certified source of natural potash

Phosta K is a high-analysis organic potash, so it's perfect for organic growers. It helps with drought and disease resilience, and improves plant uptake of nitrogen and phosphate fertilisers.

Key Benefits

Phosta K is BioGro certified

As a by-product of the sugarcane processing industry, Phosta K is made from 100% plant-based material. It delivers a natural form of chloride-free potassium that is kind to soil biology.

Nutrients are released more slowly

The nutrients are released more slowly to plants, so it's a cost effective product. Plants can access what they need over a longer period and environmental wastage is reduced.

Added nutrients

Phosta K is more than just a source of potassium. It also contains plant-available sources of phosphorus, sulphur, magnesium, calcium and trace elements.

Application

Apply at 100 kg/ha.

Storage

Store in a cool, dry, well-ventilated place out of direct sunlight.
